

INFORMATION SHEET

Permanent / Semi-Permanent Electric Fencing

Since 1982 Kiwitech permanent electric fences have enabled thousands of farmers to affordably and effectively subdivide in order to better utilise pasture. No other permanent electric fencing system is as tough, flexible or as quick to construct.

Key Advantages

Typical 3 Wire Kiwitech Sheep/Cattle Fence
Integral fence components, unique to Kiwitech, are exploded.

Cost:
\$0.98/m
NZD (GST excl) for a
1000m long fence
*(not including labour or
strainer posts)*

Post Type:
10mm
Plain & Arrow (50%,
50%) (12m spacing)

Clip Type:
10mm Single
Wedge Clip

Low-cost!	A 1000m fence can cost as little as \$520.00 NZD.
Quick & Simple to Construct	No expertise or heavy machinery required - save on labour costs.
Tough	Low tensioned, high-tensile wires stretch with any impact and spring back unharmed.
Versatile	Suits any terrain (flat to steep), any earth type (rocky to sandy) any stock type (sheep to deer).
Modular	Wires can be added, heights adjusted with relative ease.
Easy to Maintain	No electric shorting out or leakage with fibreglass posts. Wire tension or a broken wire is quick and simple to fix.
Labour Saving	Modified vehicles and synthetic-soled pedestrians can cross anywhere along the fence line without stopping to open gates or alter course while travelling between jobs.
Clever Gate Systems	Kiwitech gates are virtually an extension of the fence line (they have all the same qualities), can be as wide as 20m and, instead of being a necessary expense, become an optional extra as pinning down or propping up a Kiwitech fence enables stock to cross from one paddock to the next.
